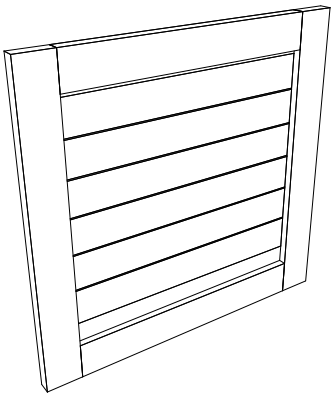
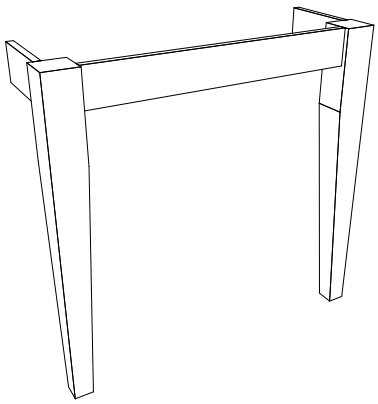
ISLAND END 4

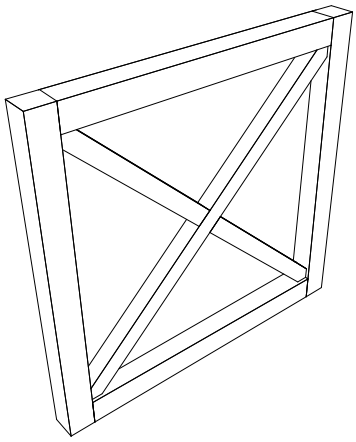
ISLAND END 5



ISLAND END 6

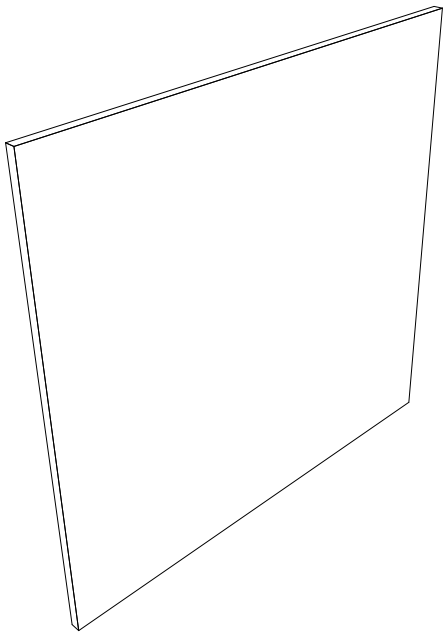


ISLAND END 7



ISLAND END 8

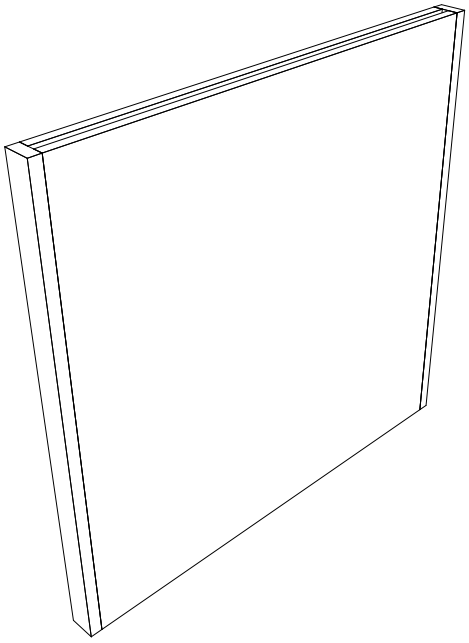
ISLAND ENDS



END 1

Island End 1- Slab

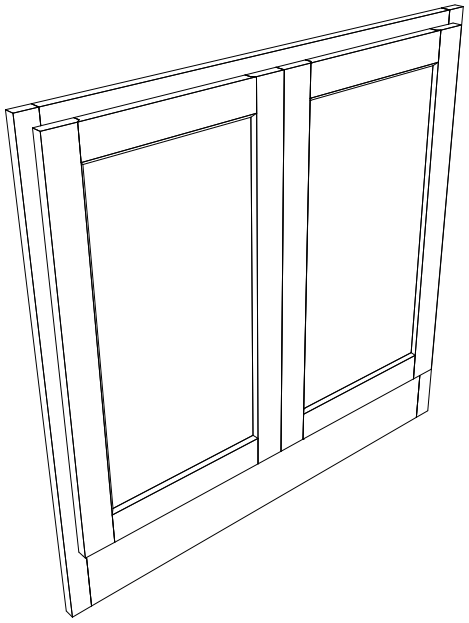
- 3/4" thick edge-banded sheet good
- Vertical or horizontal grain (Edge banding will always be vertical grain)
- Typically used for Euro style cabinets
- V grooves can be added to simulate planking.



END 2

Island End 2- Slab Column

- 2"-6" thick
- Vertical grain



END 3

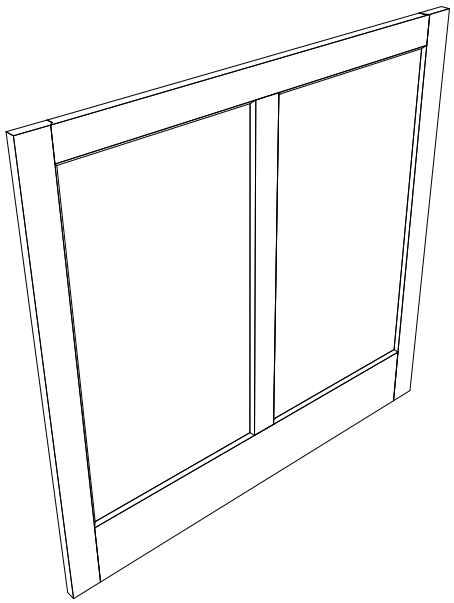
Island End 3- Add-on Door Panels

- Non-functional door panels

This style can also be used on the island back

Back width:

27" min. to 50" max. (2 panel)
50" min. to 72" max. (3 panels)
72" min. to 108" max. (4 panels)



END 4

Island End 4- Wainscot

This style can also be used on the island back

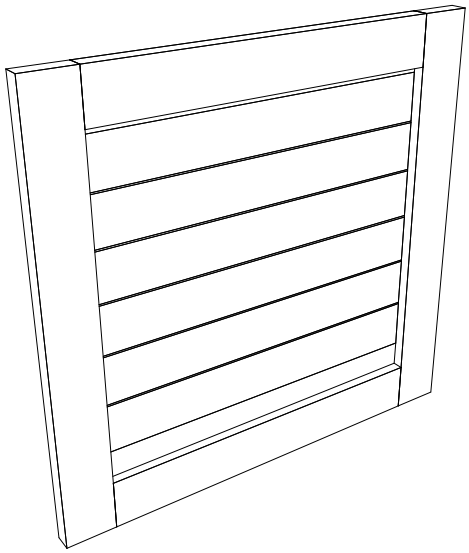
Back width:

27" min. to 50" max. (2 panel)
50" min. to 72" max. (3 panels)
72" min. to 108" max. (4 panels)

END 5

Island End 5- Shelves/Legs

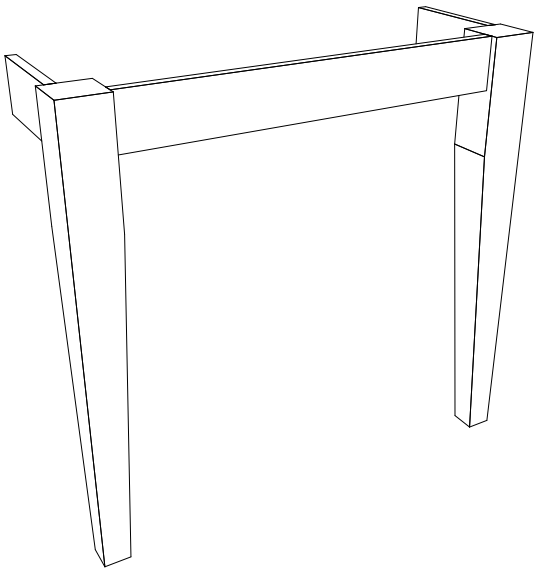
- Choose from any of the leg options



END 6

Island End 6- Planked End

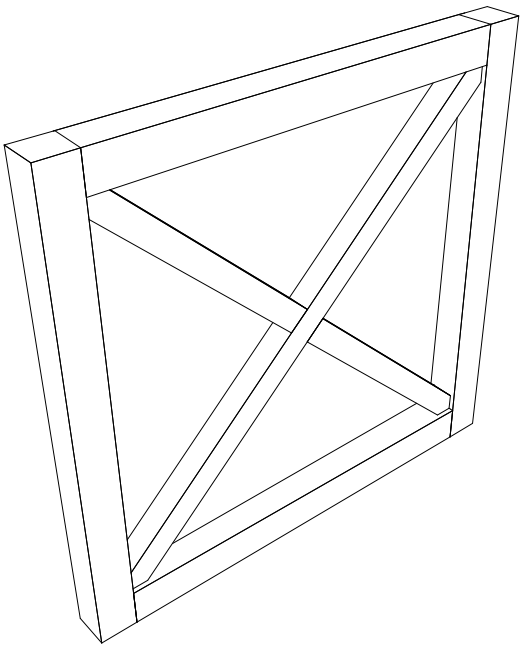
- 1 1/4" thick frame
- Vertical or horizontal planks
- 4" planks (or specify)



END 7

Island End 7- Legs w/ Aprons

- Specify depth for countertop overhang
- Choose from any of the leg options
- Specify apron width



END 8

Island End 8- X-Island End

- 2 3/4" x 2 3/4" frame
- "X" is 1 7/8 w" x 1 5/8 d"
- 36" or 48" wide

TERMS OF PAYMENT
STEPS TO GETTING A DELIVERY DATE

-When The Project Is Designed By Woodland-

Step 1 (Customer) Send us your floor plans, elevations, and/or inspiration images. We will contact you and confirm the following information:

- Cabinetry allotment
- Time frame
- Scope of project
- Project specifications-design direction
- Location

Step 2 (Woodland) Based on this project information, we will provide you an initial quote*

Step 3 (Customer) Once the quote is approved, a non-refundable design deposit of up to 50% is required.

Step 4 (Woodland) After the design deposit is received, we will contact you to establish design goals, appliance specifications, house moulding information, and finish selections. Custom finish sample strike-offs can be requested at an additional cost.

Step 5 (Woodland) Using this specific information, we will provide 'approval drawings' of your cabinetry to fit the current project space.

Step 6 (Customer) You will either approve & sign, or redline & reject these approval drawings. Redlined/rejected drawings return to our drawing queue to be updated according to the noted changes and resubmitted to you within a resonable time frame. One redlined revision per project will be provided. After which, revisions may be commissioned at an hourly rate of $175 per hour

Step 7 (Woodland) Once approval drawings and finish selections have been approved and signed, a final quote, or project total, will be provided, including any change orders** made per your requests throughout the approval process.

Step 8 (Customer) Changes made during the approval process may have increased the project total. In these cases, a pre-production deposit to bring total paid up to 50% will be applied to the project. Once this second payment has been received, we will provide your DELIVERY/SHIPPING date ***.

PLEASE NOTE:

* Quotes are valid for 30 days. For design phases that take longer than 30 days, the quote will need to be reviewed and updated to match current material costs.

** Changes requested throughout the approval process or after a project delivers are called 'change orders'and will need to be signed for approval to avoid delays. Change orders that need to be rushed during the installation of a project, will be charged a rush processing fee. Though changes are common during the approval process, excessive changes to design, floor plans, and project specifications will delay delivery and increase costs.

*** A 50% payment will be invoiced within 4 weeks prior of your ship/delivery date and due before your order ships.

Terms of payment may change based on scope and duration of project

©2023 Woodland Furniture, LLC | 4475 S. 15th West Idaho Falls, ID 83402 | 208.552.5016

TERMS OF PAYMENT
STEPS TO GETTING A DELIVERY DATE

-When The Project Is Designed By You, Using Our Catalog-

Step 1 (Customer)	Send us your 2020 file (.kit) OR a list of cabinet components that you'd like to order. Also provide any extra information that you feel we will need to execute your project.
Step 2 (Woodland)	Based on the current project information, we will provide you a quote.
Step 3 (Customer)	Once you review the estimate and approve it, a 50% pre-production deposit is required.
Step 4 (Woodland)	After deposit is received, we will schedule your project in production and provide your DELIVERY/SHIPPING DATE. The final 50% payment for your project will be invoiced approximately 4 weeks prior to your ship/delivery date.
Step 5 (Woodland)	Woodland will ship on that date only in payment in full has been received.

PLEASE NOTE:

* Quotes are valid for 30 days.

LIMITED WARRANTY

Woodland Furniture, LLC, warrants to the original residential owner that all products manufactured by Woodland are free from defects in material and workmanship for the life of the product. The coverage provided in this document is exclusive to the original registered owner and is based upon the criteria outlined herein:

Hinges: Under normal use, the hinges we use will provide a lifetime of operation. Each type of hinge we use has a maximum operational range when the door is fully open (as defined by respective hinge manufacturer). In the event that the door is opened beyond the maximum operational range of the hinge, product failure may occur and is not covered under this warranty.

Drawer Guides: The guides used in our products will have a static load rating of 100 lbs. User should be aware that this load rating is established with the weight evenly-distributed throughout the drawer. Unevenly-distributed weight and/or improper use of the drawer can result in failure of the guide and is not covered under the warranty. If drawers are removed from the cabinet, improper reinstallation may result in the drawer hardware's locking mechanism not being properly engaged. This can result in drawers pulling free from the hardware and cabinet when fully opened. This condition is not covered under this warranty.

Adjustable Shelves: While our adjustable shelves are designed to provide years of service, users can create scenarios that will induce product failure. Generally, it should be understood that shelves whose width is 30" or greater will be subject to a condition referred to as a "sag" or "bowing". Even distribution of shelf load will help reduce this condition, as will regular rotation of shelves (flipping the top and bottom sides of the shelf; this also helps reduce wear to a single face shelf surface). Shelves 30" or wider are not warranted against shelf sag or bowing.

Large Doors or Drawer Fronts: Doors over 48" h are not warranted unless a center mullion is applied. Doors whose overall height is greater than 69"h are not warranted against warp,twist, bowing or cupping. Additionally, doors or drawer fronts whose width is roughly 75% wider that the respective height may exhibit twist, warp, bowing or cupping and are not covered under warranty.

Finish: The protective top-coat applied to our products is designed to meet/exceed the requirements of the Kitchen Cabinet Manufacturer's Association. It is intended for normal kitchen cabinet application within the interior of a residential dwelling and is not suitable for outdoor use. As with any quality finish, it will wear with age and use, depending on the owner's maintenance of the cabinetry. Exposure to abrasive chemicals, solvents, excessive UV light and moisture can cause the finish to fail. Due to variables involved in the maintenance of the finish, the Warranty on this aspect of our cabinetry is limited to two years from the original date of purchase. No Warranty is provided for unfinished cabinets and/or accessories.

Wood Materials: Woodland utilizes both solid and veneered wood material in its products. While made of the same species, veneered materials composition causes it to receive stain differently than solid wood. Larger components are typically produced out of multiple pieces of material and, while that material may be from the same species,the individual pieces will display some inherent color variation. Due to normal variations in the density and graining of wood itself, the same stain applied to another piece of the same wood species may result in somewhat different appearance and shade of color. This variation can be greater when comparing solid wood to veneers. This cumulative effect of these conditions result in an aesthetic diversity considered integral to the natural beauty of wood. Due to inherent variations in the construction of wood veneer, Slab Veneer Door Styles will display some obvious differences in graining and coloration. Additionally, all wood species will exhibit color changes when exposed to all types of light, natural and man-made. With most species, the wood will darken over time, though some species may yellow or fade with age. These conditions are not hindered by the finishing process. Color variations are also caused by the assortment of minerals found in the earth in which the tree was grown as well as the season in which the tree was harvested. All species will exhibit the following attributes: sap runs, knots, pinholes, mineral streaks, pitch pockets, vine marks, bark marks, burls and heart streaks. These characteristics will occur in varying degrees dependent upon the type of wood species and its respective harvest conditions. It should be noted that cabinets and accessories that are only clear-coated (no stain color or paint color applied to them) will typically display significant color variation; such color variation shall not be considered "defective". This warranty does not cover the effects of light and aging upon Woodland's product.

LIMITED WARRANTY

Painted Finishes: For products with a painted finish, Woodland utilizes a combination of solid wood, veneered wood and MDF materials. Each of these materials is a unique substrate with varying physical characteristics that respond to paint differently. Solid wood components are more subject to expansion and contraction due to changes in humidity and temperature. As a result, small hairline fissures may develop at the joints where multiple pieces of solid wood meet. Veneered components may exhibit tiny surface fractures when the product is exposed to excessive environmental dryness. Components made from MDF lack a surface grain direction and, as a result, won't display the tiny directional grain telegraphing that can be seen in painted solid wood and veneered wood components. It should be noted that painted finishes can react to all types of light (natural & man-made) and may change color over times. The chemical makeup of the paint used in Woodland's product does not hinder the environmental reaction.

Products Not Manufactured By Woodland: Products bought and supplied, but not manufactured by Woodland, such as blowers, hood liners, decorative hardware, glass, recycling centers, spice racks, tip-out trays, lazy susans, SPILMATs, retractable towel racks, wire tray dividers, polymer trash bins, wire pantry storage, closet rods, tabletop grommets, hanging file hardware, heat shields, metal support brackets are warranted for the period of 1 year.

Custom Materials, Custom Door Style, Custom Moulding: In the event that Woodland produces a product out of Custom Materials not formally available within its published offering, that product shall be warranted for a period of 1 year. If that Custom Material can no longer be sourced domestically (within the western United States) within the first year of ownership, Woodland shall be free from warranting the product, as the product is no longer available. If Woodland produces product in a Custom Door Style or as a Custom Moulding not normally available within our published offering, that product shall be warranted for a period of 1 year.

This Warranty is provided expressly in place of all other warranties and representations, expressed or implied and all other obligations or liabilities of Woodland. This Warranty does not cover products that are misused, mishandled, improperly installed, installed or used outdoors, abused, improperly stored, that have been subject to negligence or accident or have been altered or repaired outside the factory of Woodland in any way. Additionally, this Warranty does not cover products that are subjected to extreme temperatures, humidity or dryness. Product must me maintained within an environment where the temperature range doesn't exceed 50-85 degrees F and the humidity is not outside the rang of 25-40%. Product that has been changed, modified, or altered beyond its original manufacture shall not be covered under this Warranty. Products that are not used and maintained per Woodland's original intent and design are not covered by this Warranty. Normal wear and tear does not constitute a defect and shall not be covered under this Warranty. Products NOT supplied by Woodland are not covered under this Warranty.

After Woodland has had an opportunity to inspect the product, Woodland, at its sole discretion, will confirm or refute the existence of a claimed defect. In the event Woodland confirms the existence of a defect, the sole remedy to the original residential owner is either repair or replacement of the product, which shall be determined by Woodland. Replacement products provided under this Warranty may not exactly match original products due to the passage of time, natural aging process and evolution of Woodland's product offering, manufacturing methods and materials. Woodland shall not be liable for consequential, indirect or incidental damages. This Warranty does not cover delivery costs or labor charges to remove or reinstall products or any related components, such as appliances and countertops. This Warranty gives you specific legal rights; you may also have other rights which may vary from state to state, province to province and country to country. Woodland reserves the right to change, without notice, design specifications and materials as conditions require and as improvements are developed. Woodland is under no obligation to incorporate such changes in products previously manufactured that aren't affected by the defect. Woodland may, at its sole discretion, substitute a similar product for replacement of a previously manufactured product.

Warranty will only be provided to the original residential owner. Ownership of the product will be registered with Woodland at time of purchase and with invoice. Proof of purchase satisfactory to Woodland to indicate that you are the original residential owner is required to obtain benefits under this Warranty. This Warranty is only valid if the original residential owner uses the parent dwelling as their primary or secondary home. This Warranty is non-transferable and does not extend to future owners if the property is sold.

LIMITED WARRANTY

Jurisdiction and venue for any dispute regarding the product sold, this Warranty or any other matter that may arise between Woodland and original residential owner shall be Bonneville County, Idaho, USA, exclusively. The terms and conditions of this Warranty and any dispute regarding the same shall be governed and interpreted under the case and statutory law of the State of Idaho.

All Claims for defective goods must be submitted to Woodland in writing and must specify the defects present in the product. Woodland may, at their discretion, require the product to be returned for inspection with transportation charges prepaid by original residential owner, prior to honoring a claim. Do not return any product to Woodland without prior written authorization. All claims must be either hand-delivered or mailed to Woodland at the following address:

Woodland - Warranty Claim
4475 S 15th W
Idaho Falls, Idaho
cabinetryktu@woodlandfurniture.com
www.woodlandfurniture.com
208.552.5016

Punch List

Woodland will perform one final walk through with the Customer or Customer's Representative prior to closing the project. It is imperative that the customer perform a thorough site visit prior to the final walk through with a Woodland Representative. This allows the Customer the opportunity to become aware of any issues needing to be discussed with Woodland's Representative at the final walk through.
Customer / Customer's Representative and a Woodland Representative signature will be required at final walk through indicating all punch list items to be completed. Any project additions / changes made after punch list form has been signed will be considered a change order at the Customer's expense, excluding warranty items.

Upon completion of punch list items, Customer / Customer's Representative and a Woodland Representative will sign the punch list form again acknowledging punch list is closed. Any change orders in regards to the punch list will be addressed as soon as our production calendar will allow.

Woodland will schedule project production upon receipt of the Customer/Customer Representative's production deposit and signature on approval drawings, finishes, and warranty acknowledgement.

Signature _____ Date _____

E-Signature _____ Date _____

A signed or e-signed copy of this warranty is required to begin production drawings. This warranty may not be changed by any oral or written representation.

Under normal conditions, all wood products contain some moisture, and wood readily exchanges moisture with the environment. This is true of all wood products, whether they are raw or finished. Although a finish will slow this process, wood will continue to react to changes in humidity and environment.

Wood does not change size or shape unless its moisture content changes due to humidity conditions of the environment. When humidity conditions are high, wood absorbs moisture and swells (or expands). In low humidity conditions, wood releases moisture and shrinks (or contracts).

Wood products perform successfully when correctly used in a proper environment. Woodland selects and uses only properly kiln-dried woods with a 5%-8% moisture content to ensure stability in climate controlled homes. Relative humidity inside the home should be maintained within a range of 40%-50%. Homes without proper temperature and climate control will likely experience problems with dimensional change of the wood. Care should especially be taken during site storage and installation.

Care

- Take extra care when placing heavy, sharp, or abrasive items on your piece.
- Extreme moisture or dryness will cause panel expansion or contraction, joint separation, veneer checking or cracking and, possibly, delaminating may occur (veneers separating from their substrate).
- Avoid placing hot pots or pans directly on your piece. Instead, use hot pads or trivets to protect the finish.
- Wipe up spills quickly to avoid cloudiness or blushing.
- Never put solvent based liquids on your piece which potentially can melt the finish.

Cleaning

- Furniture and other wood polish is not recommended as it will cause build-up on the finish.
- Mix a few drops of dish detergent with a gallon of clean warm water. Dip a clean cloth into the solution and use where needed on your furniture/cabinetry to remove oil and dirt. Quick ly wipe dry with a clean cloth.

- Avoid using household cleaners on your woodwork. Many contain harsh chemicals which can discolor, weaken, and/or leave clarity blocking residue.

- Avoid using household furniture cleaning and polishing products. These products may temporarily leave unwanted residues which attract dust and reduce clarity over time, lowering the overall beauty of the piece.

Maintenance

- Clean as needed as described above.
- Over time and due to everyday use, light surface scratches will appear on your finish. To fill these light scratches and renew the clarity and beauty of your piece, a furniture paste wax (i.e. Briwax, Fiddes, or LakeOne), may be applied every 6-12 months or as desired.

Touch Up Kit

- Touch-up kits are not automatically included, but are available for purchase with your order.

- A touch-up kit includes: A "filler" which is a small bottle of putty or fill stick, and a "color", which is a marker or a paint/stain bottle with a brush.

- For custom finishes, it is not guaranteed that a complimentary "Filler" will be provided with your touch-up kit. However, a complimentary color will always be provided.

- Touch-up kits are intended to cover normal touch-up needs of a regular sized kitchen. It's the customer's responsibility to purchase the number of kits needed to cover touch-up needs of your project.

- Touch-up colors will be close complimentary colors but are not guaranteed to be an exact match.

Wood Characteristics

Wood is a natural resource, exposed to many variables as it grows. Wood responds to its environment and creates unique grains and characteristics largely considered the best part of its enduring beauty. These include naturally-occurring deposits, knots, sap runs, and worm holes. The result is an unpredictably beautiful product where no two pieces are exactly the same; even within the same species, it will vary in color, texture, and grain. For many people, these variances are part of the charm and elegance of wood cabinetry, but a too-wide variation can affect the overall result in a room. As a result, even though Woodland will hand-select wood within the project to minimize a drastic variation, a mild variation can still result.

In helping customers choose the best finish, the following should be kept in mind:

- Paint Finishes: Much of the wood grain will be lost to a paint finish.

- Stain Finishes: The wood grain will be exaggerated under a stain finish. In an extremely open grain, color-change will be dramatic, creating a larger grain variation.

- Aging: Wood gets darker or lighter with age. This process increases when exposed to light (particularly sunlight).

- Cleaning: Harsh chemicals, heat, or excessive moisture will also discolor natural wood.

Wood Types

Maple

- Color: Overall creamy-white color. Variations in color can range from white to light brown.
- Grain: Close-grained hardwood that is characterized by its smooth texture. Relatively uniform, but can have patches of lighter density (keep in mind for darker stains). In addition, may contain mineral streaks.
- Finishing: Maple is good with paints and stains, although dark stains tend to accentuate the less-dense grain, creating a mottled appearance.

Cherry

- Color: Largely characterized by its red undertones. Variations in color from white to a deep, rich brown.
- Grain: Close-grained with a fairly uniform texture.
- Finishing: Stain finishes will noticeably darken over time, which is a well-known aspect of those who select a stained Cherry finish.

Alder

- Color: Similar to Cherry, ranging from a light honey color to a reddish-brown hue.
- Grain: Has a straight, fine-textured grain similar to Cherry.
- Finishing: Takes well to paints and stains, but will lighten with exposure to extreme sun light.

Rustic Alder

- Color: Light-brown with reddish undertones.
- Grain: Known for its knots, of various sizes and colors. Besides frequent knots, has a straight, fine-textured grain similar to Cherry.

    - Sound Closed Knot: Is not moveable (up to 3" diameter)
    - Sound Knot with Cracks: Non-moveable knots with open cracks (up to approximately 1" in length)
    - Open Knot: Preferred by customers requesting this wood species. Range can go up to roughly the size of a penny. Holes are desirable and are left unfilled.
    - Unsound Knot: Knots with a moveable core are removed and treated, as above.
    - Knot Clusters: A cluster of tight, sound knots are expected in Rustic Alder.
    - Worm Holes / Pin Holes: Can go through door and are expected in species (up to ¼" diameter).
    - Worm Tracks: Expected and common, up to 8" long and 1/8" wide.

- Finishing: Takes well to paints and stains, but will lighten with exposure to extreme sun light. Knots will be a tighter grain and are generally already darker than the rest of the raw wood

Oak

- Color: White Oak tends to be a light beige through brown. Red oak has pinkish and reddish hues
- Depending on the type of cut, be it flat sawn, quarter sawn, or rift sawn it can have waves, curls, or straight grain - all with uneven texture. Ray pattern that runs alongside grain is unique. In red oak, it can sometimes look like someone took a dark pencil and drew dotted lines across a board.
- Finishing: Oak's light coloring makes it a great choice for staining. Wire-brush distressing is commonly done on oak to create additional texture and makes oak a great choice for aged, worn-looking stain finishes.

Walnut

- Color: Light brown to dark chocolate, with some blonde or yellow as well. More subdued, overall grayish tone. Unfinished/clear-coated walnut lightens slightly over time, unlike cherry, maple and oak which all darken as they age.
- Grain: Straight-grained, but sometimes with waves or curls which enhance the character of a piece.
- Finishing: Walnut is often clear-coat finished to bring out the natural grains, but has a refined, quality look when stained also. Our Antwerp finishes on walnut are lightly wire-brushed with a colored wax application to enhance the grain.

SHARE WITH US

We'd love to see photos from your finished project! Please send project photos (jpg or pdf) to woodlandenews@woodlandfurniture.com to possbily have your project featured in our advertising and social media content. Please include any copyright information for design, photography, contractor, etc. so that we can give credit where it's due.
